Internet of Things with Arduino Blueprints Pradeeka Seneviratne

Develop interactive Arduino-based Internet projects with Ethernet and WiFi

About This Book

- Build Internet-based Arduino devices to make your home feel more secure
- Learn how to connect various sensors and actuators to the Arduino and access data from Internet
- A project-based guide filled with schematics and wiring diagrams to help you build projects incrementally

Who This Book Is For

This book is intended for those who want to learn more about Arduino and make Internet-based interactive projects with Arduino. If you are an experienced software developer who understands the basics of electronics, then you can quickly learn how to build the Arduino projects explained in this book.

What You Will Learn

- Make a powerful Internet controlled relay with an embedded web server to monitor and control your home electrical appliances
- Build a portable Wi-Fi signal strength sensor to give haptic feedback about signal strength to the user
- Measure water flow speed and volume with liquid flow sensors and record real-time readings
- Secure your home with motion-activated Arduino security cameras and upload images to the cloud
- Implement real-time data logging of a solar panel voltage with Arduino cloud connectors
- Track locations with GPS and upload location data to the cloud
- Control a garage door light with your Twitter feed
- Control infrared enabled devices with IR remote and Arduino

In Detail

Arduino is a small single-chip computer board that can be used for a wide variety of creative hardware projects. The hardware consists of a simple microcontroller, board, and chipset. It comes with a Java-based IDE to allow creators to program the board. Arduino is the ideal open hardware platform for experimenting with the world of the Internet of Things. This credit card sized Arduino board can be used via the Internet to make more useful and interactive Internet of things projects.

Internet of Things with Arduino Blueprints is a project-based book that begins with projects based on IoT and cloud computing concepts. This book covers up to eight projects that will allow devices to communicate with each other, access information over the Internet, store and retrieve data, and interact with users—creating smart, pervasive, and always-connected environments. It explains how wired and wireless Internet connections can be used with projects and the use of various sensors and actuators. The main aim of this book is to teach you how Arduino can be used for Internet-related projects so that users are able to control actuators, gather data from various kinds of sensors, and send and receive data wirelessly across

HTTP and TCP protocols.

Finally, you can use these projects as blueprints for many other IoT projects and put them to good use. By the end of the book, you will be an expert in the use of IoT with Arduino to develop a set of projects that can relate very well to IoT applications in the real world.

Style and approach

Every chapter in this book clearly explains how to assemble components through easy-to-follow steps on while laying out important concepts, code snippets, and expected output results so that you can easily end up with a successful project where you can also enhance or modify the project according to your requirements.

From reader reviews:

Patricia Joyner:

Your reading 6th sense will not betray you actually, why because this Internet of Things with Arduino Blueprints book written by well-known writer who really knows well how to make book which might be understand by anyone who also read the book. Written within good manner for you, leaking every ideas and creating skill only for eliminate your personal hunger then you still question Internet of Things with Arduino Blueprints as good book not merely by the cover but also by the content. This is one e-book that can break don't determine book by its protect, so do you still needing another sixth sense to pick that!?! Oh come on your looking at sixth sense already alerted you so why you have to listening to one more sixth sense.

Karolyn Kaufman:

Don't be worry should you be afraid that this book can filled the space in your house, you may have it in e-book method, more simple and reachable. That Internet of Things with Arduino Blueprints can give you a lot of pals because by you taking a look at this one book you have issue that they don't and make anyone more like an interesting person. This specific book can be one of a step for you to get success. This e-book offer you information that probably your friend doesn't learn, by knowing more than other make you to be great persons. So , why hesitate? Let us have Internet of Things with Arduino Blueprints.

Jason Scott:

As a pupil exactly feel bored to reading. If their teacher asked them to go to the library or even make summary for some book, they are complained. Just very little students that has reading's spirit or real their leisure activity. They just do what the professor want, like asked to the library. They go to right now there but nothing reading seriously. Any students feel that reading is not important, boring in addition to can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this era, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Internet of Things with Arduino Blueprints can make you feel more interested to read.

Cheryl Bullen:

Some people said that they feel bored when they reading a e-book. They are directly felt it when they get a half areas of the book. You can choose the particular book Internet of Things with Arduino Blueprints to make your own reading is interesting. Your current skill of reading talent is developing when you just like reading. Try to choose simple book to make you enjoy to study it and mingle the sensation about book and studying especially. It is to be first opinion for you to like to wide open a book and read it. Beside that the book Internet of Things with Arduino Blueprints can to be your friend when you're sense alone and confuse in doing what must you're doing of this time.
