Japan's Software Factories: A Challenge to U.S. Management Michael A. Cusumano
Though Japan has successfully competed with U.S. companies in the manufacturing and marketing of
computer hardware, it has been less successful in developing computer programs. This book contains the
first detailed analysis of how Japanese firms have tried to redress this imbalance by applying their skills in
engineering and production management to software development. Cusumano focuses on the creation of
"software factories" in which large numbers of people are engaged in developing software in cooperative
ways--i.e. individual programs are not developed in isolation but rather utilize portions of other programs
already developed whenever possible, and then yield usable portions for other programs being written.
Devoting chapters to working methods at System Developing Corp., Hitachi, Toshiba, NEC, and Fujitsu, and
including a comparison of Japanese and U.S. software factories, Cusumano's book will be important reading
for all people involved in software and computer technology, as well as those interested in Japanese business
and corporate culture.
