Metasomatic Textures in Granites: Evidence from Petrographic Observation (Springer Mineralogy)

Jiashu Rong, Fenggang Wang

Based on hundreds of thin sections from granite in China, this book introduces metasomatic textures and their formation mechanism in granite. It also proposes that metasomatic textures can basically be classified into two patterns: hetero-oriented replacement and co-oriented replacement, according to the consistency of orientations of replacive and replaced minerals. The hetero-oriented albitization of K-feldspar is quite distinct from the co-oriented albitization of K-feldspar. They occur separately without transition, although both are generally referred to as albitization of K-feldspar.

This unique granite atlas uses a series of color microphotos taken with a quartz plate under crossed polars to clearly illustrate metasomatic mechanisms and superimposed metasomatic processes. The origins of clear albite rim, intergranular swapped albite, K-feldspathization, quartzification, muscovitization, beryllization, myrmekite, small platy albite, perthitic albite, K-feldspar megacryst etc. are comprehensively discussed and explained. The book will appeal to teachers, researchers and students involved in igneous and metamorphic petrology.

Bruce Hensley:

As a scholar exactly feel bored in order to reading. If their teacher inquired them to go to the library or to make summary for some guide, they are complained. Just tiny students that has reading's heart and soul or real their hobby. They just do what the educator want, like asked to go to the library. They go to there but nothing reading really. Any students feel that reading through is not important, boring as well as can't see colorful images on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this period, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. So , this *Metasomatic Textures in Granites: Evidence from Petrographic Observation*

(Springer Mineralogy) can make you feel more interested to read.
