**Economics of Property Management: The Building as a Means of Production** Herman Tempelmans Plat, Frank Heynick

The economic analysis of a building is a complex subject and traditionally it has focused on a single aspect of the structure or a single part of the construction process. Dr Tempelmans Plat is a leading proponent of a new methodology which focuses on the building as a stock of services to be supplied over a long lifespan. This method is more realistic since it takes into account the changes in use and the adaptation of the building over its life. This book will be the first to make this method comprehensible to a wide audience of postgraduate students and professionals in the field of construction economics.
