A Textbook of Cancer Epidemiology Adami, Levy, Becker, Ashla, Mueser, Greenberg, Cameron, Schweitzer, Frank, Pellegrino, Danis, Donald Hunninghake, Robert Knopp, Nicholas A. Athanasou, Botkin, Jonathan Abrams

This superb text gives a concise, systematic account of what is currently known about the epidemiology and primary prevention for most forms of human cancer. Early chapters summarize the principles and methods of epidemiology, the biology of cancer, cancer genetics, the emerging potential of biomarkers, and the burden of cancer around the world. Then chapters of uniform structure on over 20 types of cancer provide clinical and pathological outlines, descriptive epidemiology, and a comprehensive account of risk factors and their etiological importance. Specific sections address somatic and germ cell mutations that play a role in the occurrence of particular forms of cancer.
